# Online Shopping System Project Use Case Diagram

Here are the diagrams with discussion of **Online Shopping System** Project Use Case Diagram using Include and Extend 2021.

1. **General Use Case**

   Now I present to you the general use case of the Online Shopping System. This diagram shows the general processes or function that the system could do that is based on the activities done by the shopping admin, customers and sellers in the system.

   General use case is the most common application of a use case diagram. The use case diagrams depict the system's main components as well as the flow of information between them.

With the help of this general use case, the programmer will have the basis on what could be put into consideration in creating the online shopping system.

2. **Manage Customers' Information**

This is where the admin or the main user of the system could control the users/customers that could access the system.

USE CASE DIAGRAM

As you can see the customer should have their information encoded to the system. The system then will monitor its details to validate it and then saves the data.

3. **Manage Products Info and Status**

This is the process where the admin will monitor the products for a certain category to display it as offer to the customers. The monitoring consist of the encoding the products from the sellers, updates the products' status and the count of its orders and deliveries to the customers.
