

Student Information System Project Use Case Diagram

Here are the diagrams with discussion of **Student Information System Project Use Case Diagram** using **Include** and **Extend** 2021.

1. General Use Case

Now I present to you the general use case of the Student Information System. This diagram shows the general processes or function that the system could do which is based on the transactions done by the admin in managing the students' information and status.

STUDENT INFORMATION SYSTEM

USE CASE DIAGRAM

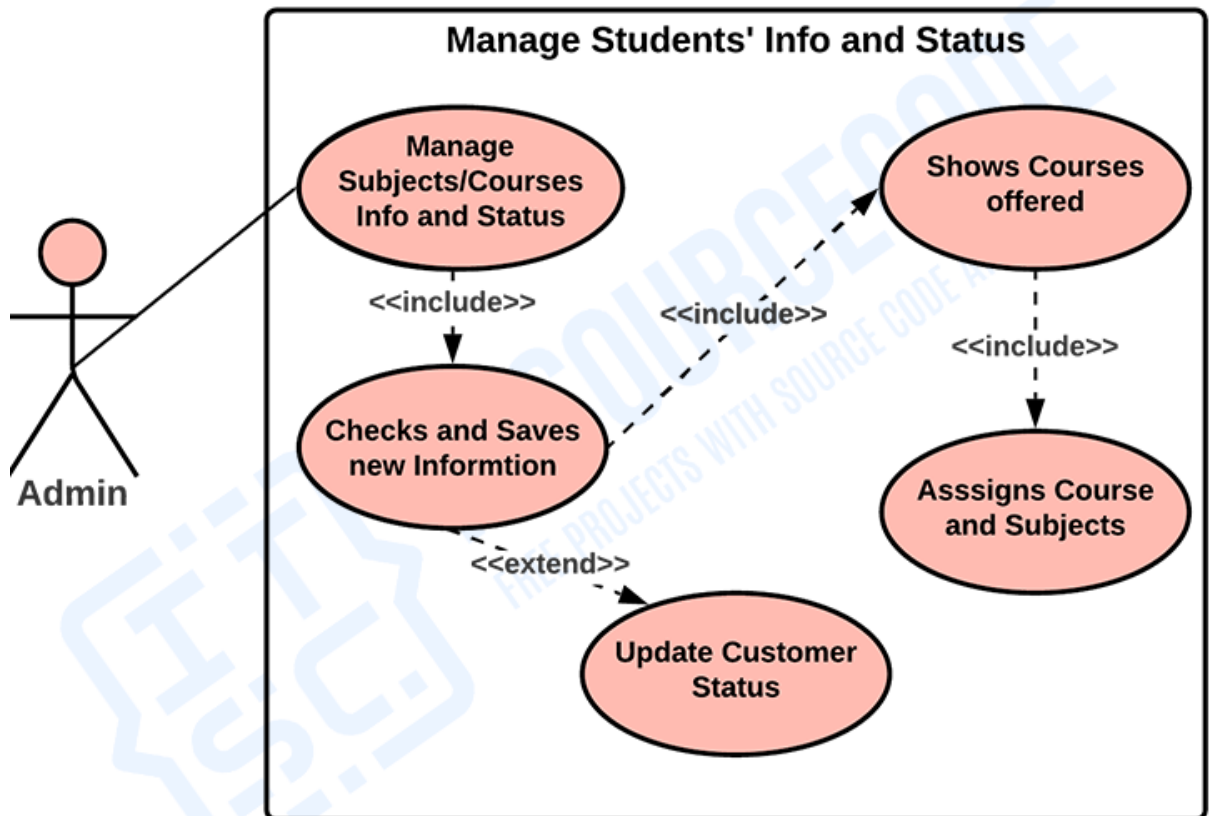

General use case is the most common application of a use case diagram. The use case diagrams depict the system's main components as well as the flow of information between them.

With the help of this general use case, the programmer will have the basis on what could be put into consideration in creating the Student Information system.

2. Monitor and Manage Students' Information and Status

This is where the registrar admin manages the important information of the student that will serve as basis during a student process a transaction and update their status.

STUDENT INFORMATION SYSTEM

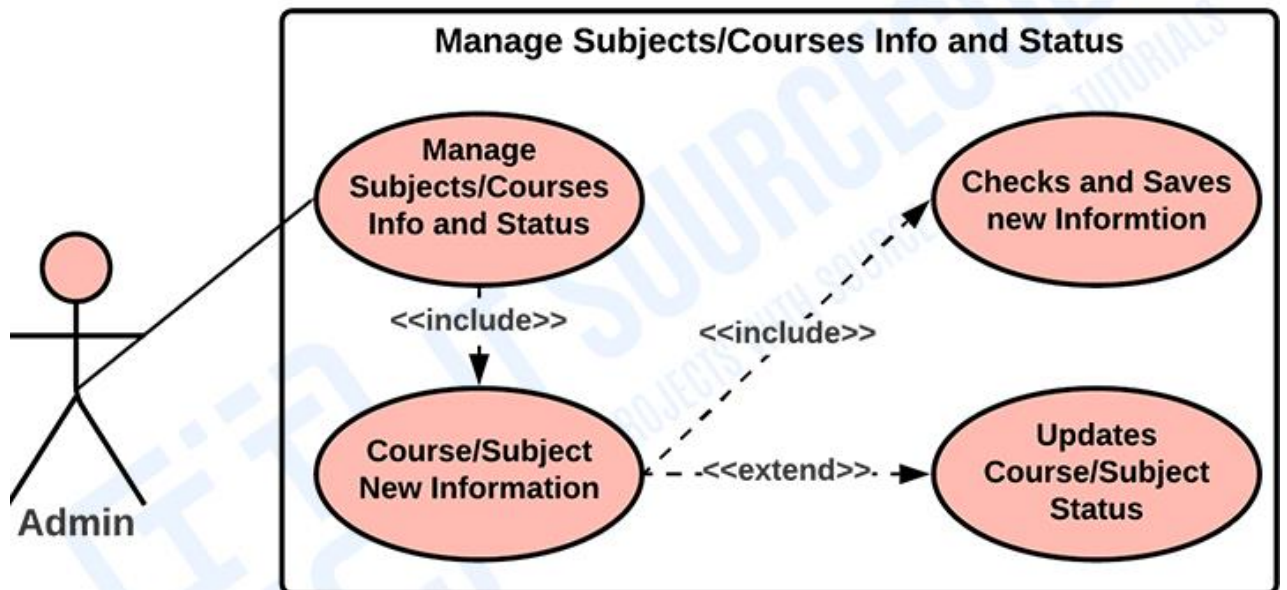

USE CASE DIAGRAM

As you can see the students' information should be encoded to the system. The system then will monitor its details to validate it and then saves the data.

3. Manage Courses/Subjects' Info and Status

This process starts with the encoding of a course that the school wants to offer. Then after the encoding, the admin will then assign the subjects that were under that certain course and then save it to have the prepared basis for the information updates.
