# University Registration System Project Use Case Diagram

Here are the diagrams with discussion of **University Registration System Project Use Case Diagram** using **Include** and **Extend** 2021.

1. **General Use Case**

   Now I present to you the general use case of the University Registration System. This diagram shows the general processes or function that the system could do that is based on the activities done by the registrar admin and student registries in the system.

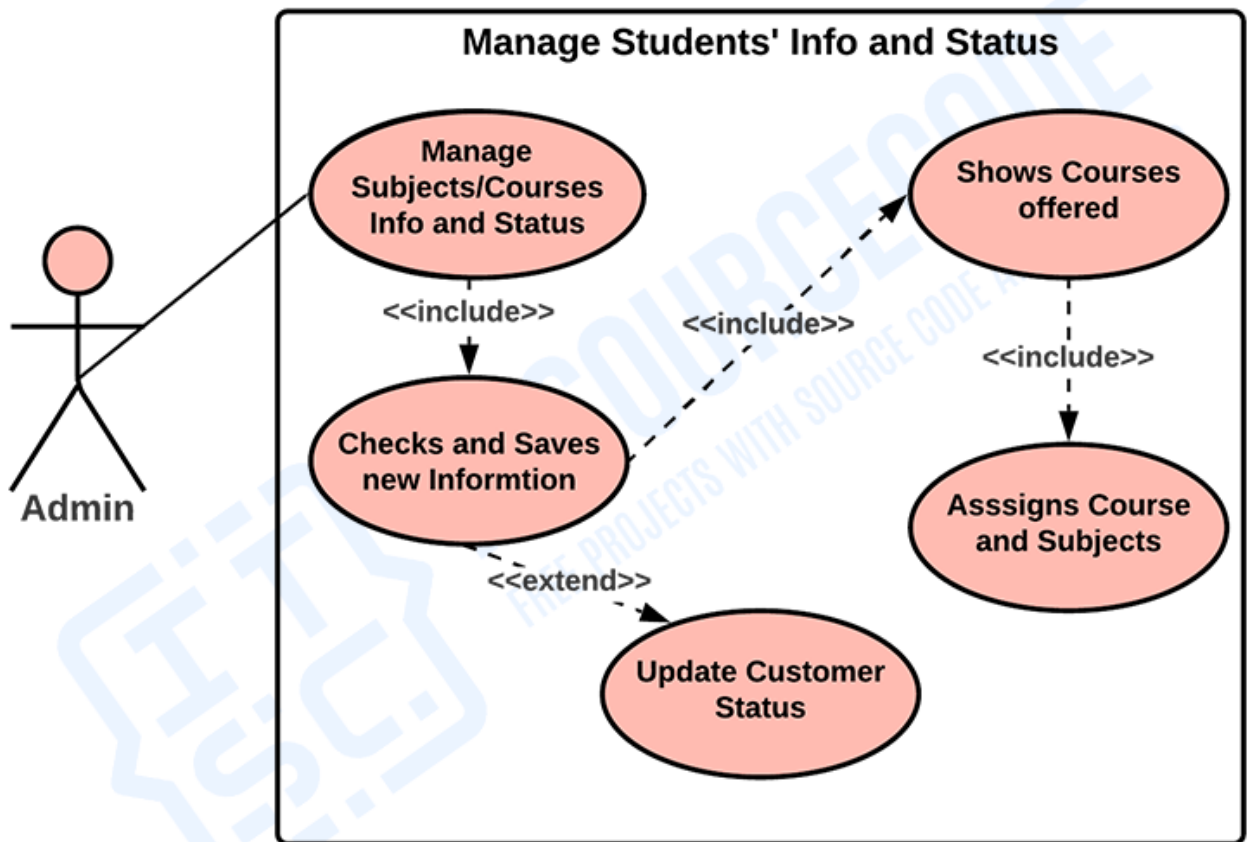

General use case is the most common application of a use case diagram. The use case diagrams depict the system's main components as well as the flow of information between them.

With the help of this general use case, the programmer will have the basis on what could be put into consideration in creating the University Registration system.

2. **Monitor and Manage Students' Information and Status**

This is where the admin or the main user of the system could control the registries' information that could be their basis for the registration transactions.

## USE CASE DIAGRAM

As you can see the students' information should be encoded to the system. The system then will monitor its details to validate it and then saves the data.

3. **Manage Courses/Subjects' Info and Status**

This is the process where the registrar admin will have to disseminate the appropriate subjects for the courses offered that will be taken by the registries. This process starts with the encoding of a course that the university wants to offer. Then after the encoding, the admin will then assign the subjects that were under that certain course and then save it to have the prepared basis for the registration.

4. **Manage University Information**

This process explains about how the admin or users handles the enrollment transaction in accord to the university information. The essence of this process is that it records the transaction made between the registries and the admin.
