

Car Rental System Project Use Case Diagram

Here are the diagrams with discussion of **Car Rental System Project Use Case Diagram** using **Include** and **Extend** 2021.

1. General Use Case

Now I present to you the general use case of the Car Rental System. This diagram shows the general processes or function that the system could do that is based on the transactions done by the system admin in managing the their customers' rental transactions.

USE CASE DIAGRAM

General use case is the most common application of a use case diagram. The use case diagrams depict the system's main components as well as the flow of information

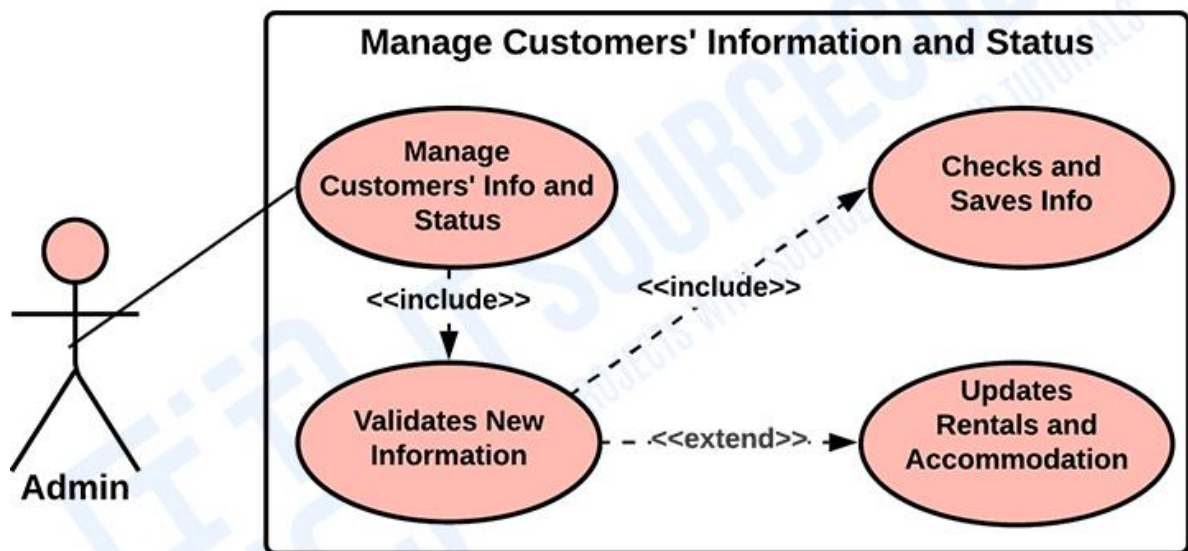

between them.

With the help of this general use case, the programmer will have the basis on what could be put into consideration in creating the employee management system.

2. Manage Customers' Information and Status

The system admin should manage the customers' rental information to track their cars and services availed. This will serve as the basis of the management to sum up their income and expenses.

CAR RENTAL SYSTEM

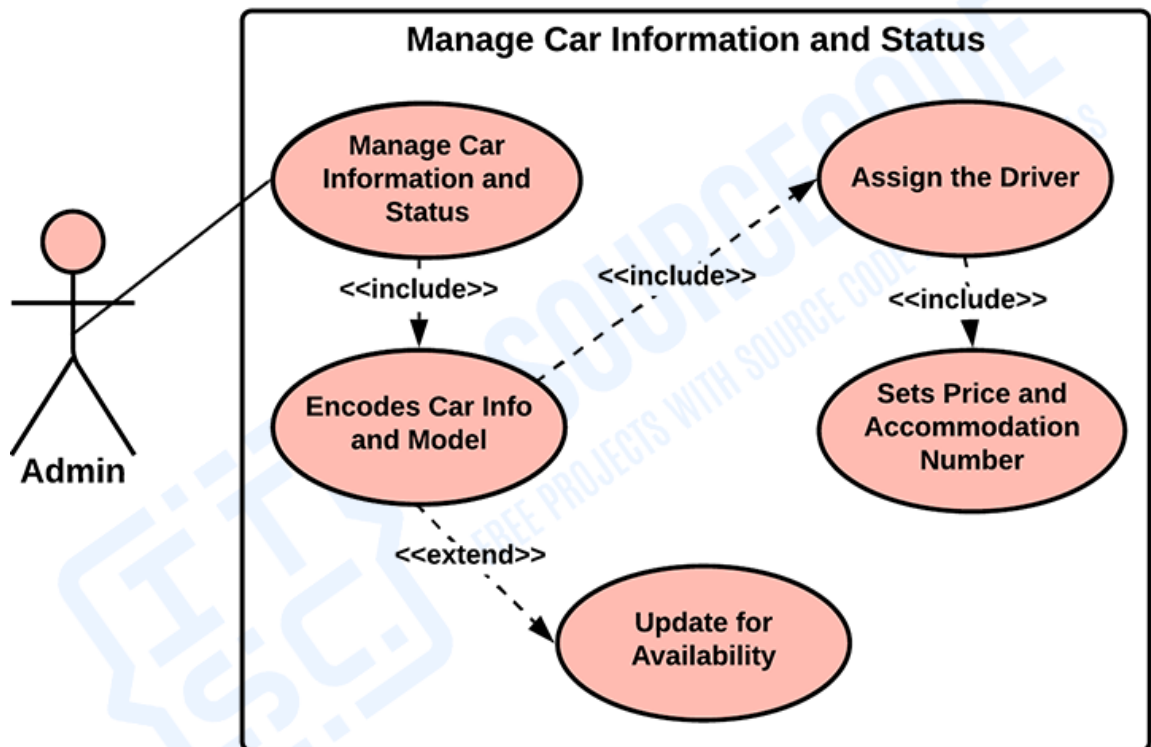

USE CASE DIAGRAM

As you can see the customers' information should be encoded to the system. The system then will monitor its details to validate it and then saves the data.

3. Manage Car Information and Status

This is where the admin of the system could manage and monitor their car information and services. In this process they were able to assign the drivers and prizes of the service that are offered for rentals.

4. Manage Rentals Info and Prizes

This is the process where the admin will have to manage every transaction done by the customers in the system. Through this, the admin can monitor their customers as well as the services availed, they can also be able to check their revenues and prepare in advance for new accommodations.
